Subjects	Chapter																				
Introduction to the Immune System: Nomenclature, General Properties, and Components	1																				
Unlabeled image-Innate Immunity: The Early Defense Against Infections	2																				
Antigen Presentation to T Lymphocytes and the Functions of Major Histocompatibility Complex	3																				
Antigen Recognition in the Adaptive Immune System: Structure of Lymphocyte Antigen Receptors and Development of Immune Repertoires	4																				
T Cell-Mediated Immunity: Activation of T Lymphocytes	5																				
Effector Mechanisms of T Cell-Mediated Immunity: Functions of T Cells in Host Defense	6																				
Humoral Immune Responses: Activation of B Lymphocytes and Production of Antibodies	7																				
Effector Mechanisms of Humoral Immunity: Elimination of Extracellular Microbes and Toxins	8																				
Immunologic Tolerance and Autoimmunity: Self-Nonsel Self Discrimination in the Immune System and Its Failure	9
